Quarterly Market Outlook — 2026 Q3

Macro Summary

Growth is moderating as policy rates hold. Base case is a soft landing with disinflation continuing through year end. Duration risk is balanced; credit spreads remain tight.

Equities

Prefer quality and free-cash-flow durability over high-beta cyclicals. Managed equity sleeves should trim concentrated single-name exposure and rebalance toward the household's agreed target mix.

Fixed Income

Intermediate investment-grade offers the best risk-adjusted carry. Extend duration opportunistically on rate spikes. Avoid reaching for yield in lower-quality credit.

Advisor Actions

Use the outlook to frame proactive review meetings. Households with negative net cash flow or stale engagement should be prioritized for a planning conversation this quarter.
